

ROBUST HIGH QUALITY FLOW MONITORS

Elettas alternative for replacement of
ABB TIVG Flow Indicator

Robust Flow Monitors with alarm for controlling the flow in pipes

The Flow Monitor is a protective device which controls that the given flow of the liquid in a pipe is at a correct rate and controls any deviations with pre-set micro-switches.

The Eletta TIVG-S series is replacing the old TIVG-F and -R series with updated materials and functions. The upgrade gives a higher quality monitor allowing higher flow rates and wider flow turndown.

The Eletta TIVG-S comes with one or two microswitch setpoints which are adjustable within the chosen measuring range. They can be set for high and/or low flow alarms for example to protect expensive equipment such as; coolant in transformers, induction coils of furnaces, generators, diesel engine and compressors. It can supervise the supply of fuel oil to central heating boilers and lubricating oil to gear units and bearings. It can cope with almost anything that flows, high and low viscous liquids, contaminated or clean and for many different flow ranges up to 20 000 l/min.

The monitor is insensitive to surrounding magnetic fields and it combines the long-standing proven mechanical function with outstanding reliability. The products are manufactured with all wetted parts in Stainless Steel except for threaded 1 1/2" BSP-F in brass.

- The new TIVG-S is designed to one-to-one replacement without modifications to your system.
- TIVG-S has a much higher flow measurement capability
- TIVG-S has a better material of construction
- TIVG-S has a higher flow measurement turndown
- TIVG-S has a higher pressure rating and standard
- TIVG-S has an option for higher temperature limit if required in certain cases of lube oil circuits
- Insensitive to magnetic fields
- Shows flow without external power

In 1994, Eletta Flow acquired the exclusive rights for the ABB Flow Indicator TIVG in order to add this product to our existing offer of Eletta Flow Monitors. Over the years, we have seen limitations in specifications and as a result, a decline in sales for this original ABB product. We have therefore developed an updated version where we combine the Eletta Flow Monitors with the TIVG functions and measures in order to create a direct replacement to the old TIVG. This updated version is called TIVG-S and

we have actually included more options and features into their new model than we were able to offer before. The aim was of course to keep all important measures of the old model so you can direct replace the old version with the new TIVG-S, without any modifications to the existing pipe configuration at site. We have added a schematic picture below to describe how easy the replacement is.

Old TIVG-R with one microswitch
Threaded connection

Replaced by TIVG-V15R
One microswitch and indicating window
Threaded connection

Old TIVG-R with two microswitches
Threaded connection

Replaced by TIVG-S25R
Two microswitches and large dial
Threaded connection

Old TIVG-F with two microswitches
Flanged connection

Replaced by TIVG-S25F
Two microswitches and large dial
Flanged connection

Technical specification

TIVG-V15R Series

Flow Monitor with aluminium housing and threaded stainless steel pipe connection ½" and 1" BSP-F. One microswitch. Small indication window.

Replaces old TIVG-15 and 25R series with one microswitch.

TIVG-V15R Series

Flow Monitor with aluminium housing and threaded pipe connection in brass 1 ½" BSP-F. One microswitch. Small indication window.

Replaces old TIVG-40R with one microswitch.

TIVG-S25R Series

Flow Monitor with aluminium housing and threaded pipe connection in brass 1 ½" BSP-F. Two microswitches. Large dial.

Replaces old TIVG40R with two microswitches.

TIVG-S25R Series

Flow Monitor with aluminium housing and threaded stainless steel pipe connection ½" and 1" BSP-F. Two microswitches. Large dial.

Replaces old TIVG15 and 25 with two microswitches.

TIVG-S25F Series

Flow Monitor with aluminium housing and flanged stainless steel pipe connection except for DN350 and 400 which comes in painted carbon steel. Available in DIN from 15-400 mm. Two microswitches. Large dial.

Replaces old TIVG15-400F with double microswitches.

Flow range	0,2 – 20 000 l/min (liquid), to choose the right range, please refer to table of Measuring ranges page 4.
Flow turndown	1:5
Wetted Material	Stainless steel 316L/1.4404, DN40 threaded comes in brass.
Rubber Parts	Nitrile (HNBR), EPDM or Fluorinated rubber (FPM)
Min. pressure	Aprx. 700 – 1000 mbar (0,7 – 1 bar)
Max. pressure	16 bar, DN250-400 10 bar.
Max. temp. Control Unit	90°C standard, 120°C optional
Max. temp. Pipe Section	V15R/S25R brass 1 ½" BSP-F: 120°C V15R/S25R in SS: 250°C
Enclosure	IP65 (NEMA4)
Electrical terminal	Ceramic
Indicating window	Acrylic
Dial	Large 120 mm diameter with linear scale and front glass of PC
Process Connection	½", 1" and 1 ½" BSP-F thread DN15 – 400 DIN flange
Alarm Contacts	TIVG-V15 one microswitch and TIVG-S25 two microswitches independently adjustable within the ordered flow range.
Micro switch spec	Contact surfaces are silver plated as standard. Type: SPDT Hystereses: 10% Rated voltage: 480 VAC / 15A Breaking current: 15@125, 250, 480 VAC Resistive load: 2A@30 VDC, 0,4A@125 VDC, 0,2A@230 VDC
Accuracy	<+/- 5% F.S within 20-80% of Flow range <+/- 10% F.S within 100% of Flow range
Repeatability	<2% actual
